

OBE type Direct Operated Linear Servo Valves

On-board electronics (OBE) type direct operated linear servo valves are based on high speed linear servo valves (LSVG) and OBE type linear servo valves (LSVHG-*EH), providing "high accuracy, easiness to use, and great usability".

● **High accuracy**

As is the case with the high speed linear servo valves, all of the OBE type direct operated linear servo valves have a low hysteresis of 0.1 % or less, realizing high accuracy. These valves allow the main unit to operate with much higher repeatability.

● **High response characteristics**

Compared to other equivalent models, these valves provide higher levels of step and frequency responses, which are typically used as measures of response characteristics; the step response is 3 ms (0 <=> 100 %), and the frequency response is 260 Hz/-3 dB (± 25 % amplitude).

[★ : Representative values for LSVG-03EH with the Y port (dry type)]

● **Easiness to use**

These valves can offer high accuracy for hydraulic control systems just with 24 V DC power supply and command signal input.

Six types of input signals in three input voltage/current ranges are available: 0 - ±10 V, 0 - ±10 mA, and 4 - 20 mA.

● **Great usability**

The small amplifier in the valves has a fault indicator lamp. This lamp indicates an error when valve failure causes any deviation between the spool position commanded by the signal and the actual spool position. It facilitates you to immediately troubleshoot the failure of the valves, if any.

● **Excellent contamination resistance**

As is the case with the high speed linear servo valves, the OBE type direct operated linear servo valves have a simple pilot valve structure, exhibiting excellent contamination resistance. The permissible level of fluid contamination for these valves is up to NAS 1638 class 10.

OBE(On-Board Electronics) Type Linear Servo Valves (Std. Type)

On-board electronics (OBE) type linear servo valves have been developed based on two stage type high speed linear servo valves, but with a focus on downsizing the pilot valve. The integration of the exclusive amplifier and the linear servo valve in a compact package provides “high accuracy, easiness to use, and great usability”.

- High accuracy

As is the case with the high speed linear servo valves, all of the OBE type linear servo valves have a low hysteresis of 0.1 % or less, realizing high accuracy. These valves allow the main unit to operate with much higher repeatability.

- High response characteristics

Compared to other equivalent models, these valves provide higher levels of step and frequency responses, which are typically used as measures of response characteristics; the step response is 7 ms (0 <=> 100 %)★, and the frequency response is 125 Hz/-3 dB (± 25 % amplitude)★. (★ : Representative values for LSVHG-03EH)

- Easiness to use

These valves can offer high accuracy for hydraulic control systems just with 24 V DC power supply and command signal input.

Six types of input signals in three input voltage/current ranges are available: 0 - ±10 V, 0 - ±10 mA, and 4 - 20 mA.

- Great usability

The small amplifier in the valves has a fault indicator lamp. This lamp indicates an error when valve failure causes any deviation between the spool position commanded by the signal and the actual spool position. It facilitates you to immediately troubleshoot the failure of the valves, if any.

- Two types of pilot valves available

There are two types of pilot valves available: a dry type good in response characteristics and a wet type that eliminates the drain (DR) port to improve usability. They can be selected according to users' purposes.

- Excellent contamination resistance

As is the case with the high speed linear servo valves, the OBE type linear servo valves have a simple pilot valve structure, exhibiting excellent contamination resistance. The permissible level of fluid contamination for these valves is up to NAS 1638 class 10.

Graphic Symbols

- Spool Types “2”, “2P”, and “2L”

- Spool Type “40”

- Spool Type “4J”

The symbols above indicate the external pilot/internal drain type. The internal pilot/internal drain type is the same as that for the spool types “2”, “2P”, and “2L”.

Input Signal/Spool Travel Monitoring “D”/“E”/“F”

The pilot and drain types are the same as those for the input signal/spool travel monitoring “A”/“B”/“C”.

- ★ 1. The available combinations of the spool type, fail-safe function, and input signal/spool travel monitoring are limited. For details, see the chart on the right.
- ★ 2. The valves with the model number “W” (without DR port) cannot use water-glycol fluids.
- ★ 3. For the valves with the fail-safe function “EC”, select “2” only for the connector type.
- ★ 4. For the spool type “4J”, the rated flow is a value obtained with +100% input and P → A flow (input signal/spool travel monitoring “A”, “B”, and “C”) or P → B flow (“D”, “E”, and “F”).
- ★ 5. For the spool function in the neutral position, see the chart below.

Spool Type	Fail-safe Function	Input Signal/Spool Travel Monitoring
2	With Solenoid Operated Valve: EC	All (A, B, C, D, E, F)
40	Without Solenoid Operated Valve: None/A	
2L	With Solenoid Operated Valve: EA/EB	
2P	Without Solenoid Operated Valve: None/A	
4J	With Solenoid Operated Valve: EC	D, E, F
	Without Solenoid Operated Valve: None	A, B, C
	Without Solenoid Operated Valve: A	

Spool Function in Neutral Position

Spool Type	Function
2, 2P, 2L	
40	
4J	

Fail-safe Function of the Valves

With reference to the information given below, select the option for the fail-safe function according to the use of applications. The valves have a fail-safe function, but a separate safety circuit should be provided if the hydraulic actuator must be reliably held or stopped to ensure safety in the event of electric failure (power failure, power cable disconnection, etc.) or upon startup.

1) Electric System: OFF and Hydraulic System: ON (Power Failure/Power Cable Disconnection)

No.	Model Numbers	Fail-safe Function*
1	(F-)LSVHG-**EH-*/2P/2L(-E)(T)(-W)	P→B→A→T Position Valve Opening: Full
2	(F-)LSVHG-**EH-*/2P/2L(-E)(T)(-W)A	P→A→B→T Position Valve Opening: Full
3	(F-)LSVHG-**EH-*/4J(-E)(T)(-W)	P→B→A→T Position Valve Opening: Full
4	(F-)LSVHG-**EH-*/4J(-E)(T)(-W)A	P→A→B→T Position Valve Opening: Full
5	(F-)LSVHG-**EH-*/2P/2L(-E)(T)(-W)EA (With Fail-safe Solenoid Operated Valve)	P→A→B→T Position Valve Opening: 10%
6	(F-)LSVHG-**EH-*/2P/2L(-E)(T)(-W)EB (With Fail-safe Solenoid Operated Valve)	P→B→A→T Position Valve Opening: 10%
7	(F-)LSVHG-**EH-*/4J(-E)(T)(-W)EC-A*/B*/C* (With Fail-safe Solenoid Operated Valve)	A, B, T Connection (Neutral)
8	(F-)LSVHG-**EH-*/4J(-E)(T)(-W)EC-D*/E*/F* (With Fail-safe Solenoid Operated Valve)	A, B, T Connection (Neutral)

★The fail-safe activation time depends on the electric and hydraulic conditions.

2) Electric System: OFF and Hydraulic System: OFF (Startup)

For Models No. 1 and 2 in the table above, the fail-safe function holds the spool in the neutral position. For Models No. 5 and 6, the function is the same as that for “Electric System: OFF and Hydraulic System: ON”. For Models No. 3, 4, 7, and 8, the function is based on A, B, T connection (neutral).

Note) ⁽¹⁾ Pressure at the return port should be at actual supply pressure or less.

⁽²⁾ Back pressure at the drain port should be 0.05 MPa or less and not be a negative pressure.

⁽³⁾ Supply pressure for the pilot valve should be 1.5 - 21 MPa and should also be 60 % of actual supply pressure or more.

⁽⁴⁾ The pilot flow is calculated based on a pilot pressure of 14 MPa and the above step response.

⁽⁵⁾ To use an external pilot type valve with a supply pressure of 21 MPa or more, pressures at the T and Y ports should be 7 MPa or less.

⁽⁶⁾ This value is measured for each valve based on a pilot pressure of 14 MPa; it may vary depending on the actual circuit/operation conditions.

⁽⁷⁾ There are restrictions on the mounting position; refer to the instructions for details.

⁽⁸⁾ A value in brackets indicates the mass of each valve with a fail-safe solenoid operated valve.

⁽⁹⁾ For the effective range of the fail-safe function, see page I-60.

	Coil Resistance	Ω	9.6 [at 20 °C]				
Approx. Mass ⁽⁶⁾		kg	8.5 [11]	14 [16]	20 [24]		
Electric Connection			6 + PE/11 + PE Connector 【EN175201 Part 804】				

Note) (1) Pressure at the return port should be at actual supply pressure or less (to use an external pilot type valve with the size “03” at 21 MPa or more, pressures at the T and Y ports should be 7 MPa or less).

(2) Back pressure at the drain port should be 0.05 MPa or less and not be a negative pressure.

(3) Supply pressure for the pilot valve should be 1.5 - 21 MPa and should also be 60 % of actual supply pressure or more.

(4) The pilot flow is calculated based on a pilot pressure of 14 MPa and the above step response.

(5) This value is measured for each valve based on a pilot pressure of 14 MPa; it may vary depending on the actual circuit/operation conditions.

(6) A value in brackets indicates the mass of each valve with a fail-safe solenoid operated valve.

(7) For the effective range of the fail-safe function, see page I-60.

★1. Differential input signals can be used only for the valves with the voltage signal specifications of ±10 V (LSVHG- *EH-A*/D*).

★2. The recommended load resistance is 200 Ω.

★3. Pins 9 and 10 are used only for the valves with a fail-safe solenoid operated valve. In this case, use a separate power source for the solenoid operated valve from the power source for the amplifier (Pins 1 and 2).

I/O Signal Characteristics

· LSVHG- *EH- * -A*/B*/C*

· LSVHG- *EH- * -D*/E*/F*

Block Diagram

● LSVHG- *EH- * - * -A1/D1 (6 + PE Connector)

Note) 1. The input stage for the models LSVHS- *EH- * - * -B1/C1/E1/F1 (current signal) is as follows.

● LSVHG- *EH- * - * -A2/D2 (11 + PE Connector)

Note) 1. The input stage for the models LSVHG- *EH- * - * -B2/C2/E2/F2 (current signal) is as follows.

2. Pins 9 and 10 are used only for the models LSVHG- *EH- * - * - *E* with a fail-safe solenoid operated valve.

LSVHG-03EH-230/270

Model Number	C	Remarks
LSVHG-03EH- * - *	168	Pilot Valve: Dry Type
LSVHG-03EH- * - * - W	177	Pilot Valve: Wet Type

- ★1. The external connection drain port "DR" on the front side is usually plugged. To use the port on the front side, remove the hexagon socket head plug (5 Hex.) and plug the port on the back side.
- ★2. To adjust the null, remove the protective screw and turn the null trimmer. After adjustment, be sure to attach the protective screw.

LSVHG-03EH-230/270- * - * EA/EB/EC (With Fail-safe Solenoid Operated Valve)

Detailed Graphic Symbol

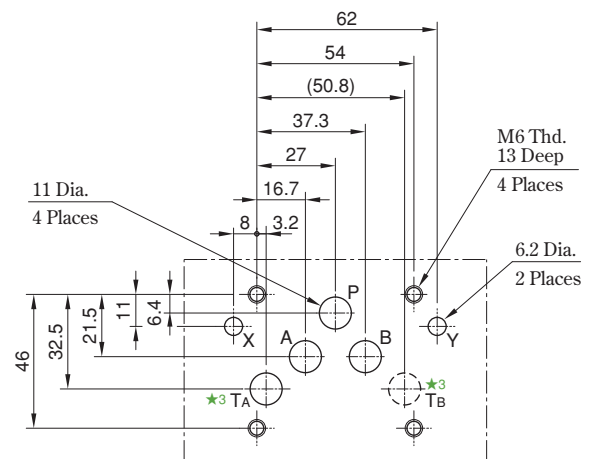

Note) The configuration in the shaded area varies with the selected spool type (corresponding to Graphic Symbols on page I-31).

⊗ : Plugs for selecting the pilot and drain types

[Dimensions of Mounting Surface]

Prepare a mounting surface shown below. Basically, the dimensions of the mounting surface conform to ISO 4401-05-05-0-05. The mounting surface should have a good machined finish. (1/6)

★3. There are two tank ports "TA" and "TB"; however, "TA" may be used alone.

Model Numbers	C	Remarks
LSVHG-03EH- * - * - E *	218	Pilot Valve: Dry Type
LSVHG-03EH- * - * - WE *	227	Pilot Valve: Wet Type

- ★1. The external connection drain port "DR" on the back side is usually plugged. To use the port on the back side, remove the hexagon socket head plug (Hex. 5) and plug the port on the front side.
- ★2. To adjust the null, remove the protective screw and turn the null trimmer. After adjustment, be sure to attach the protective screw.

LSVHG-06EH-900/1300- * - * EA/EB/EC (With Fail-safe Solenoid Operated Valve)

Detailed Graphic Symbol

Note) The configuration in the shaded area varies with the selected spool type (corresponding to Graphic Symbols on page I-31).

Model Numbers	C	Remarks
LSVHG-06EH- * - * -E *	270	Pilot Valve: Dry Type
LSVHG-06EH- * - * -WE *	279	Pilot Valve: Wet Type

● For other dimensions, see the figures above (the models without a fail-safe solenoid operated valve).

● O-Rings for the Ports

Port	O-Ring Size		Qty.
	LSVHG-06EH-900	LSVHG-06EH-1300	
P, A, B, T	AS568-123 (NBR-90)	AS568-126 (NBR-90)	4
X, Y	OR NBR-90 P14-N		2

O-Rings made of fluorinated rubber are required to use phosphate ester type fluids.

[Dimensions of Mounting Surface]

The dimensions of the mounting surface are the same as those of the models LSVHG-06 (page I-13).

LSVHG-10EH-3800

Model Numbers	C	Remarks
LSVHG-10EH-**-*	343	Pilot Valve: Dry Type
LSVHG-10EH-***-W	352	Pilot Valve: Wet Type

- ★1. The external connection drain port "DR" on the back side is usually plugged. To use the port on the back side, remove the hexagon socket head plug (Hex. 5) and plug the port on the front side.
- ★2. To adjust the null, remove the protective screw and turn the null trimmer. After adjustment, be sure to attach the protective screw.

[Dimensions of Mounting Surface]

The dimension of the mounting surface can be fitted with ISO standard. However, the hole dia. of P,A,B,T are different with those. Please see mounting surface as shown right.

	ISO 4401-10-08-0-94	Mounting Surface for LSVHG-10EH
Hole dia. Of P,A,B,T port.	36 Dia.	50 Dia.

The mounting surface should have a good machined finish. ($\sqrt{16}$)

● O-Rings for the Ports

Port	O-Ring Size	Qty.
P, A, B, T	AS568-227 (NBR-90)	4
X, Y	AS568-015 (NBR-90)	2

O-Rings made of fluorinated rubber are required to use phosphate ester type fluids.

Characteristics of LSVHG-06EH-1300-2/40/2P (Fluid Viscosity: 30 mm²/s)

No-Load Flow Characteristics

<Conditions> ● Valve Pressure Difference: 1 MPa (Pressure Difference per Land: 0.5 MPa)
 Around Null Position Input Signal -20 ⇔ +20 %

Load Flow Characteristics

<Conditions> ● Input Signal : 100 %
 Note) Tolerance for Load Flow : ±10 %

★ The flow outside of parentheses is achieved when the input signal type "A", "B", or "C" is selected. The flow in parentheses is achieved when "D", "E", or "F" is selected.

Step Response

<Conditions> ● Input Signal : 0 ⇔ 100 % ● Supply/Pilot Pressure : 14 MPa

● Pilot Valve: Dry Type

● Pilot Valve: Wet Type

Frequency Response

<Conditions> ● Hydraulic Circuit: Port A/B Closed ● Supply/Pilot Pressure : 14 MPa

● Pilot Valve: Dry Type

● Pilot Valve: Wet Type

Characteristics of LSVHG-10EH-3800-2/40/2P (Fluid Viscosity: 30 mm²/s)

No-Load Flow Characteristics

<Conditions> ● Valve Pressure Difference: 1 MPa (Pressure Difference per Land: 0.5 MPa)
 Around Null Position Input Signal -20 ⇔ +20 %

Load Flow Characteristics

<Conditions> ● Input Signal : 100 %
 Note) Tolerance for Load Flow : ±10 %

★ The flow outside of parentheses is achieved when the input signal type "A", "B", or "C" is selected. The flow in parentheses is achieved when "D", "E", or "F" is selected.

Step Response

<Conditions> ● Input Signal : 0 ⇔ 100 % ● Supply/Pilot Pressure : 14 MPa

● Pilot Valve: Dry Type

● Pilot Valve: Wet Type

Frequency Response

<Conditions> ● Hydraulic Circuit: Port A/B Closed ● Supply/Pilot Pressure : 14 MPa

● Pilot Valve: Dry Type

● Pilot Valve: Wet Type

Characteristics of LSVHG-10EH-3800-2L (Fluid Viscosity: 30 mm²/s)

No-Load Flow Characteristics

<Conditions> ● Valve Pressure Difference: $\Delta P = 1 \text{ MPa}$ (4-Way Valve) (Pressure Difference per Land: 0.5 MPa)

Around Null Position Input Signal -20 \leftrightarrow +20 %

The load flow characteristics, step response, and frequency response are the same as those of the spool types "2", "40", and "2P".

★ The flow outside of parentheses is achieved when the input signal type "A", "B", or "C" is selected. The flow in parentheses is achieved when "D", "E", or "F" is selected.

OBE (On-Board Electronics) type Linear Servo Valves (High Performance Type)

On-board electronics (OBE) type linear servo valves (high performance type) are produced for achieving higher accuracy and durability by incorporating a sleeve in the main stage of the OBE type linear servo valves (standard type), which have been well accepted for their "high accuracy, easiness to use, and great usability". Since the spool and the sleeve are processed to fit well and properly keep 1% overlap between one another, they are suited to be used for a system requiring high accuracy and durability.

● **High accuracy**

As is the case with the standard type valves, all of the OBE type linear servo valves (high performance type) have a low hysteresis of 0.1 % or less, realizing high accuracy. These valves allow the main unit to operate with much higher repeatability.

● **High response characteristics**

Compared to other equivalent models, these valves provide higher levels of step and frequency responses, which are typically used as measures of response characteristics; the step response is 7 ms (0 => 100 %)★, and the frequency response is 110 Hz/-3 dB (± 25 % amplitude)★. (★ : Representative values for LSVHG-03EH- * -S *)

● **Easiness to use**

These valves can offer high accuracy for hydraulic control systems just with 24 V DC power supply and command signal input.

Six types of input signals in three input voltage/current ranges are available:
0 - ±10 V, 0 - ±10 mA, and 4 - 20 mA.

● **Great usability**

The small amplifier in the valves has a fault indicator lamp. This lamp indicates an error when valve failure causes any deviation between the spool position commanded by the signal and the actual spool position. It facilitates you to immediately troubleshoot the failure of the valves, if any.

● **Excellent contamination resistance**

As is the case with the high speed linear servo valves, the OBE type linear servo valves have a simple pilot valve structure, exhibiting excellent contamination resistance. The permissible level of fluid contamination for these valves is up to NAS 1638 class 10.

● **Two types of pilot valves available**

There are two types of pilot valves available: a dry type good in response characteristics and a wet type that eliminates the drain (DR) port to improve usability. They can be selected according to users' purposes.

Graphic Symbols

● **4-Way Valve**

● **3-Way Valve**

Note) The pilot/drain types are the same as those for the "4-Way Valve" shown above.

■ **Model Number Designation**

		04		100 : 100 L/min 200 : 200 L/min 280 : 280 L/min 450 : 450 L/min									
		06		500 : 500 L/min 900 : 900 L/min									

★1. For the valves with a 3-way valve and a fail-safe solenoid operated valve, select "EB" for the fail-safe function type and "D", "E", or "F" for the input signal/spool travel monitoring type.
★2. The valves with the model number "W" (without DR port) cannot use water-glycol fluids.

Specifications

The values in parentheses in the specification table below are applicable to the models "LSVHG-*EH-*S*-*W*-" (without DR port).

Descriptions		Model Numbers						LSVHG-03EH- *-S*						LSVHG-04EH- *-S*						LSVHG-06EH- *-S*

Mounting Surface		ISO 4401-05-05-0-05						ISO 4401-07-06-0-05						ISO 4401-08-07-0-05										
Electric Connection		6 + PE/11 + PE Connector (EN175201 Part 804)																						

- Note) ⁽¹⁾ Pressure at the return port should be at actual supply pressure or less.
⁽²⁾ Back pressure at the drain port should be 0.05 MPa or less and not be a negative pressure. For the valves with the model number "W", no drain port connection is required.
⁽³⁾ Supply pressure for the pilot valve should be 1.5 - 21 MPa and should also be 60% of actual supply pressure or more.
⁽⁴⁾ The pilot flow is calculated based on a pilot pressure of 14 MPa and the above step response.
⁽⁵⁾ This value is measured for each valve based on a pilot pressure of 14 MPa; it may vary depending on the actual circuit/operation conditions.
⁽⁶⁾ There are restrictions on the mounting position; refer to the instructions for details.
⁽⁷⁾ To use an external pilot type valve with a supply pressure of 21 MPa or more, pressures at the T and Y ports should be 7 MPa or less.
⁽⁸⁾ A value in brackets indicates the mass of each valve with a fail-safe solenoid operated valve.
⁽⁹⁾ For the effective range of the fail-safe function, see page I-60.
